Access the inaccessible®

For you — the adventurers who climb mountains, scale cliffs on rock or ice, explore caves, or chase powder; for runners and climbers who venture out during the day or into the night; at Petzl, we're committed to bringing you the best tools possible. Our customers create their own adventures, and we create solutions that help them reach their objectives, drawing from expertise that we've built from more than 50 years of experience.

In 2023, we're continuing to focus on verticality, offering new versions of mountaineering and ski mountaineering harnesses. This means the SITTA, FLY, TOUR, and ALTITUDE all have a fresh design. Additionally, we revisited our carabiners and quickdraws, bringing you entirely updated DJINN and SPIRIT products. Finally, we focused our attention on one of Petzl's bestsellers — the BOREO helmet — and overhauled the design.

We're also putting the spotlight on our lighting products in 2023! The SWIFT RL has been a favorite over the last several seasons, providing high-performance and versatile lighting. We're confident that the newest version will exceed your expectations, casting more lumens and sporting new colors. Completely new to our lighting range, the ARIA 1 and ARIA 2 headlamps bring a new option to the table, with lighting technology that is compact, durable, waterproof, and versatile, so hunters and fishers can keep their focus where they need it.

Happy reading and have a great season!

We
are **PETZL.**

This is
how we **see the world.**

We are committed to **creating safer places.**

For those who **work and play**
in the vertical and dark worlds.

For those who want **to access**
their own inaccessible every day.

We are **independent** and completely
free to choose our own endeavors.

To maintain **industrial excellence**,
paying attention to our impact.

To be pioneers in the pursuit of
perpetual innovation.

Sharing, educating, building. **Together.**

This is
how we **see the world.**

We
are **PETZL.**

Access the inaccessible®

“Accessing the inaccessible” is the driving force behind everything you do, whether you are moving towards a summit or descending into darkness. You’re determined to get to ever-greater heights and through ever-deeper shadows. And you’re always searching for better tools to do it: tools with superior performance, tools that are more reliable, tools so comfortable and ergonomic that they disappear into your hand. At Petzl, we share your determination. We’ve built our entire design and manufacturing philosophy around exceeding your needs in the field. It’s what we’ve been doing for 50 years, and what we’ll continue to do for years to come.

Petzl Across the Globe

Petzl is a family business that, over the years, has become the largest European manufacturer of personal protective equipment for those who work and play in darkness or at height. All of our products are invented and developed at our headquarters in the heart of the French Alps.

Key Stats

The brand is present in over **55** countries

85% of sales are made internationally

More than **7** million products are sold every year

10 000 000 people use Petzl personal protective equipment every day

The Values That Motivate Us

For 50 years, Petzl has been built around four pillars, four fundamental values that motivate every decision we make: remaining a stable family business, encouraging innovation to imagine the best solutions, insisting on industrial excellence with the goal of zero defects, and remaining engaged with our communities by providing global best practices.

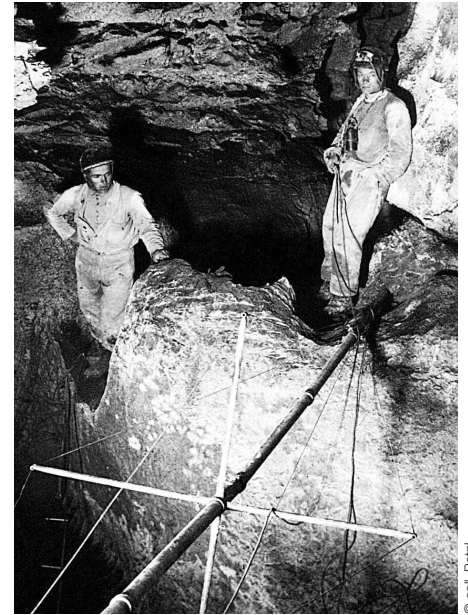

Learn more about each of our pillars.

1. Family Ownership

© 2020 - Petzl Distribution - Stéf Candès

Sébastien, Paul, and Olivier Petzl

© coll. Petzl

Fernand Petzl and Daniel Gagneur in front of a scaling pole

© coll. Petzl

Fernand in his workshop

Our story begins in the 1930s in southeastern France

That was when craftsman Fernand Petzl was introduced to caving. Back at his workshop after each excursion to the depths, Fernand imagined new tools for exploring darkness and heights. In 1968, he marketed his first products; in 1970, Petzl was born.

For decades, the Petzl family has built a stable environment that fosters creative solutions and industrial excellence. The new generation is rooted in these principles and ready to make new discoveries.

The Petzl family business is not listed on the stock market. We're proud of our independence; we make our own choices, take responsibility for our decisions, and maintain a long-term, sustainable vision for the future.

The confidence and satisfaction of our customers, our dealers, and our partners drives everything we do.

2. Innovative Spirit

Innovations That Challenge Convention

With the introduction of the first headlamp in 1973, the legendary GRIGRI assisted blocking belay device in 1991, and the MAESTRO rescue descender in 2019, Petzl ingenuity has always pushed standard practices forward. Since the creation of Petzl in 1970, our objective has always been to make progressing in dark or vertical spaces safer and more comfortable.

Going Farther

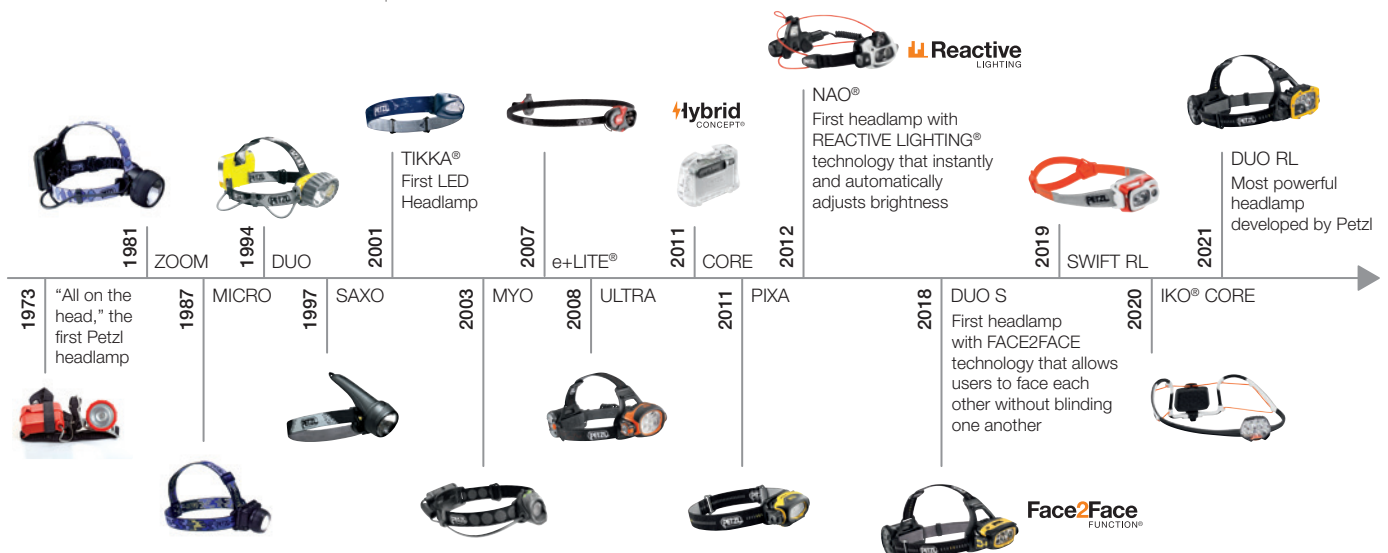

As passionate pioneers, we delight in creating new opportunities for our users to venture into ever more committing terrain — to go farther and higher, to work more efficiently, to maximize safety and to make what was inaccessible today accessible tomorrow.

Simplicity, Durability, Efficiency

The tools we make are conceived and constructed with an eye for simplicity, durability, and efficiency. For Petzl, being a pioneer has meant 50 years of passion, expertise, innovation, and continuous improvement. This approach to our craft and our business has allowed us to serve as a global expert, as we did in 2006 with the conception of the EXO personal escape system. At the request of, and in collaboration with, the firefighters of New York City, we were able to design an efficient solution that would allow easy escape in critical situations. It's an achievement that has been recognized with several awards, including best invention of the year by Time Magazine.

The Evolution of Petzl Headlamps

3. Industrial Excellence

© 2020 - Petzl Distribution - Stef Candès

Beyond the Standards

We have a deep responsibility to the people who trust us with their lives, and we develop, test, and qualify all of our products above required standards. Our design center, based in France, integrates all crafts that are related to the creation of products: mechanical, textile, electronic, optical, and technological. From the design and prototype phases, the reliability of a product and the safety of the user are continuously evaluated, with particular attention to risks of use.

With labs dedicated to product testing, we conduct dynamic fall and impact resistance tests, perform cyclical testing, and evaluate performance, as well as beam quality and burn times of our headlamps. This process includes rigorous field testing in order to test the ergonomics and reliability during real-world use.

© 2020 - Petzl Distribution - Stef Candès

Zero Defects - PPE (Personal Protective Equipment)

Reliability is at the center of our concerns: our goal is for our products to consistently function at the same level of excellence. Our objective is to allow zero defective products to leave our facilities, which involves processes with significant extra costs at every stage of production.

As we navigate an increasingly globalized economy, we go to great lengths to support our distributors and dealers, and we are heavily involved in the fight against counterfeit products.

Production and Inspection

Petzl's production sites are located in France, in the towns of Crolles, Eybens, and Rotherens, as well as in Rawang, Malaysia. Remaining competitive and keeping the majority of our production in France means that we continuously optimize our production lines and reduce our waste.

This production infrastructure is complemented by long-term partnerships with key suppliers in Europe and Asia.

Our purchasing and quality control teams work closely with suppliers, ensuring to the best of our abilities, product reliability and quality that meets or exceeds our strict requirements. Quality inspection is present throughout every step of the production process: machine inspection of operations, human inspection at key points, further reinforcement by error-proofing systems and final individual inspection of each product.

We regularly audit the methods, quality management systems, and CSR practices (Corporate Social Responsibility) of our suppliers and strategic partners, especially when it comes to their employees.

4. Community Engagement

Petzl Junior Rock Camp Germany © 2019 - Petzl Distribution - Julian Bückers

Using Our Expertise to Serve Communities

Sharing technical knowledge and appropriate product uses is at the heart of what we do at Petzl. We produce high-quality technical content that is available to everyone and utilized by the different communities that we serve. With a focus on maximizing safety, this content is updated and enriched throughout the lifetime of our products to keep our customers informed and moving forward while they practice their sport or do their job.

International Collaboration

Across the world, we have partnerships with iconic athletes, influential figures, professionals who work in extreme conditions, NGOs, certifying bodies, and training centers operated by leading experts in the field. These collaborations help us co-create a world where we can all learn, share, and flourish. They also make it easier to promote best practices and standard uses. At the heart of our collaborations is always a passion for exploration, for a job well done, and for the pursuit of the inaccessible.

The Petzl Foundation is an integral part of Petzl.

Through the Petzl Foundation, we support and initiate projects that help prevent accidents, preserve the environment, and improve knowledge of the natural world around us.

More information about the Petzl Foundation can be found on page 128.

End of a climbing day in the Gastlosen Range, Switzerland © 2019 - Petzl Distribution - Mathis Durmas

“More than ever before, we’re acutely aware that the choices we make today will have a lasting impact on the environment and will actively shape our own futures and the futures of our children. We’re committed to using our creativity and our capacity to innovate in service of sustainably reducing our impact in a continuous drive for improvement.”

Marie Pailler, CSR Manager and Sébastien Petzl, Director of CSR

Our approach to Corporate Social Responsibility (CSR) is pragmatic, collaborative, and positive. It’s built on concrete actions, feedback from our stakeholders, and is solution-oriented, to encourage our teams and community to take action.

The safety and satisfaction of our customers remains our top priority. Beyond that, however, we’re striving to create a more sustainable future.

Petzl has launched projects to improve our own economic, environmental, and social practices, as well as the practices of our suppliers in order to:

- Reduce our carbon footprint
- Improve the satisfaction of our employees
- Reduce, reuse, and recycle our waste
- Improve the labor conditions of our suppliers

Petzl harnesses are designed to meet the needs of all those who play in the vertical world, whether it's for climbing, mountaineering, via ferrata, canyoning, or caving. We offer a variety of models suited for different body types and different uses.

Designs for different body types:

- WITH adjustable leg loops, suitable for most body types and all seasons (winter and summer use).
 - WITHOUT adjustable leg loops, making it lightweight and optimizing freedom of movement.
- Women's harness with angled waistbelt and an adapted rise and waistbelt-to-leg-loop ratio.

Capacity to carry gear suited to the activity:

- For gym climbing, via ferrata, glacier travel, or classic mountaineering, two gear loops are sufficient.
- For single pitch or big wall climbing, four gear loops are necessary.
- For activities requiring a lot of gear, such as trad climbing, technical mountaineering, or ice climbing, a fifth gear loop is more practical.

Harnesses for mountaineering and ski touring:

- Weight and bulk are minimized.
- Practical to put on while wearing crampons or skis.

Product Categories for Specific Activity Levels

- The PERFORMANCE range is designed for intensive use at the crag, on multi-pitch climbs, or in the mountains: they are technical harnesses that meet your needs for minimal weight, freedom of movement, and comfort, and offer a large capacity to carry the gear for any ascent.

Petzl Harness Technology

For certain climbing and mountaineering harnesses, Petzl uses specific technologies: FRAME, ENDOFRAME, FUSEFRAME, or WIREFRAME. These constructions, which never sacrifice climber comfort, are adapted to different expectations that climbers may have, whether you're just starting out, an active climber, or looking for high performance.

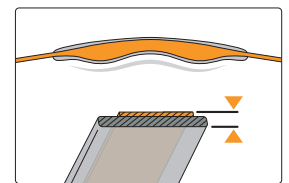

FRAME Technology

This construction forms the core of CORAX and OUISTITI harnesses and combines a thick layer of foam with central webbing on the waistbelt and leg loops. The load is distributed by the webbing that is surrounded by foam. This construction allows for great durability and comfort when hanging for long periods on a climb.

ENDOFRAME Technology

This construction method uses thin foam and specific variable-width webbing sewn onto the foam for optimal load distribution. The waistbelt webbing is wider at the hips, providing support while remaining lightweight. We've paid careful attention to providing maximum comfort and greatly reduce pressure points or hot spots on the waistbelt. ENDOFRAME technology is used in SAMA, SELENA, ADJAMA, LUNA, and MACCHU harnesses.

- The DISCOVER range is ideal if you're new to the sport or only use the harness occasionally for activities in the mountains. Versatile and adjustable, these harnesses are comfortable when hanging for long periods of time and adapt to different body types.

		Adjustable leg loops	Weight*	Number of gear loops	Gym climbing, rock climbing	Multi-pitch climbing	Trad climbing	Glacier travel, classic mountaineering	Technical mountaineering, ice climbing	Via ferrata	Ski touring

* The weight given is for size 1 or S/M.

Indoor climbing in Switzerland © 2020 - Petzl Distribution - Marc Daviet - Grimper.ch

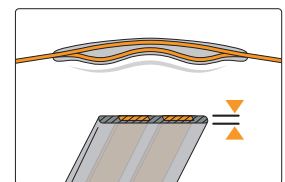

Via ferrata in Florac, France © 2019 Petzl Distribution - Sam Blé

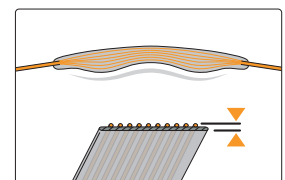

FUSEFRAME Technology

This construction uses thin thermoformed foam and doubled interior webbing for greater comfort and lightness. This gives the harnesses a smooth and clean exterior surface without adding thickness, for improved abrasion resistance. FUSEFRAME technology gives the HIRUNDOS, AQUILA, and FLY harnesses (removable foam) a clean, smart design that is light and comfortable.

WIREFRAME Technology

WIREFRAME technology uses high-modulus polyethylene (HMPE) strands. These strands are used in the waistbelt and leg loops to optimally distribute pressure, ensuring maximum comfort and freedom of movement for the climber. This construction gives the harness an exceptional weight-to-comfort ratio that makes it practically unnoticeable when worn. WIREFRAME technology, applied to a very sleek design with very slim technical lines, is perfectly suited to high-performance SITTA and ALTITUDE harnesses.

KIT

**NEW
2023**

SITTA

Ultra-light performance climbing and mountaineering harness

For climbers and mountaineers who want performance! SITTA is lightweight without compromising comfort. It's also very compact when stored in your backpack. The extremely thin and flexible waistbelt keeps your movement completely unhindered, whether you're rock climbing or mountaineering. Five gear loops allow you to carry all the gear you need to climb rock or ice. With this harness, you can power through multiple excursions: the reinforced tie-in points are designed to provide long-lasting resistance to rope friction.

Each front gear loop has a mobile separator that divides the gear loop to optimize organization (quickdraws, nuts, or cams). The separator can be moved to the back to make a single large gear loop.

Compatible with one or multiple CARITOOL EVO tool holders, for use in any season.

The durable exterior fabric and bonded construction of the waistbelt and leg loops provide optimal wear resistance.

- The perfect balance between low weight, mobility, and comfort:
 - Extremely thin and flexible waistbelt and leg loops with WIREFRAME Technology: HMPE (high-modulus polyethylene) strands used in the waistbelt and leg loops provide optimal load distribution without the use of foam and the extreme lightness and comfort of the harness make it practically unnoticeable when worn
 - Very compact when stored in its pouch
 - The fixed leg loops and supple leg loop bridge give you total freedom of movement
 - Waistbelt equipped with a DOUBLEBACK HD buckle in forged aluminum, allowing the webbing to glide smoothly for easy and quick adjustment
- Capacity to carry a large quantity of gear:
 - Two very large, rigid gear loops in front to rack a lot of gear and easily clip and unclip gear; each front gear loop has a mobile separator that divides the gear loop to optimize organization (quickdraws, nuts, or cams) and the separator

- can be moved to the back to make a single large gear loop
 - Two semi-rigid rear gear loops, angled to bring gear to the front and comfortable when carrying a backpack
 - A fifth semi-rigid gear loop in the back is easy to access and made to attach a tag line, shoes, knife, or other accessories
- Compatible with one or multiple CARITOOL EVO tool holders, for use in any season
- Enhanced durability:
 - Reinforced tie-in points in HMPE for improved resistance to wear from rope friction
 - Bonded construction of the waistbelt and leg loops offer optimal wear resistance without making the harness bulky
 - Durable, abrasion-resistant exterior fabric
 - Breathable interior fabric is quick-drying and helps manage perspiration
 - Completely water repellent construction suited to mountaineering and ice climbing

Product Specifications

- Material(s): Nylon, polyester, aluminum, high-modulus polyethylene
- Certification(s): CE EN 12277 type C, UKCA, UIAA
- Harness comes in a protective carry bag

**NEW
2023**

FLY

Ultra-lightweight and adjustable harness for technical mountaineering and ski mountaineering

The lightest Petzl harness! FLY is a minimalist harness specifically designed for technical mountaineering and ski mountaineering. It can be donned without removing your skis or crampons, making it a practical solution. It's also modular, with removable waistbelt and leg loop padding, so you can adapt the level of comfort and weight. Gear loops and ice screw retainers allow you to keep your gear within reach.

Can be donned with both feet on the ground while wearing skis or crampons.

Bulk is minimized when stored in its pouch.

FUSEFRAME technology with removable foam allows the user to adapt harness comfort to the activity.

- Lightweight and compact, ideal for the most demanding mountaineers and skiers:
 - Designed for technical mountaineering and ski mountaineering
 - Can be donned with both feet on the ground while wearing skis or crampons
 - Only 100 g (size M) without comfort foam, and 130 g with foam; extremely low weight and body-hugging fit for complete freedom of movement that will make the harness practically unnoticeable when worn
 - Innovative buckle-free construction (Petzl patent): sliding toggle lock instead of metal buckle makes it quick and easy to adjust waistbelt, and leg loops can be adjusted with a girth hitch
 - Slim design
 - Minimalist pouch allows the harness to be compressed, freeing up space in your pack

- Adjustable level of comfort:
 - FUSEFRAME technology with removable foam that allows you to adapt the level of comfort to the activity; removing the foam in the waistbelt and leg loops makes the harness even lighter
 - Comfort foam optimally distributes the load to make hanging in the harness more comfortable
 - Technical and durable:
 - Two gear loops and four additional loops to organize and carry gear required for technical outings
 - Retainer with silicone interior on each leg loop, for holding an ice screw
 - Attachment points, webbing, and gear loops reinforced with high-modulus polyethylene (HMPE), for greater resistance to abrasion and rubbing

Product Specifications

- Material(s): Nylon, polyester, high-modulus polyethylene
- Certification(s): CE EN 12277 type C, UKCA, UIAA
- Harness comes in a protective carry bag
- Also comes with minimalist pouch for stowing the harness when used without foam

ADVANCED Climbing and Mountaineering Harness

**NEW
2023**

ALTITUDE

Lightweight, compact mountaineering and ski touring harness

Go for the summit! ALTITUDE is a lightweight harness with a simple design that allows you to don the harness without taking off your skis or crampons. It's the ideal companion for ski touring or mountaineering. Two gear loops allow you to carry all the gear you need for excursions in the mountains.

Can be donned with both feet on the ground while wearing skis or crampons.

Bulk is minimized when stored in its pouch.

Two gear loops to carry gear and retainers with silicone interior on each leg loop, for carrying an ice screw.

- Designed for mountaineering and ski touring:
 - Can be donned with both feet on the ground while wearing skis or crampons
 - DOUBLEBACK LIGHT buckle and fastening strap are easy to operate, even with gloves
 - Comfortable to wear when walking or hanging
- Lightweight and compact:
 - Only 150 g (size S/M)
 - Compact when stored in the pouch
 - Extremely thin and flexible waistbelt and leg loops with WIREFRAME Technology: HMPE

- (high-modulus polyethylene) strands used in the waistbelt and leg loops provide optimal load distribution without the use of foam and the low weight and comfort of the harness make it practically unnoticeable when worn
- Simple design and capacity to carry gear:
 - Streamlined design
 - Single tie-in point
 - Two gear loops for carrying and organizing gear
 - Retainers with silicone interior on each leg loop, for carrying an ice screw

Product Specifications

- Material(s): Nylon, polyester, high-modulus polyethylene, aluminum
- Certification(s): CE EN 12277 type C, UKCA, UIAA
- Harness comes in a protective carry bag

**NEW
2023**

TOUR

Durable, lightweight harness for glacier travel and ski touring

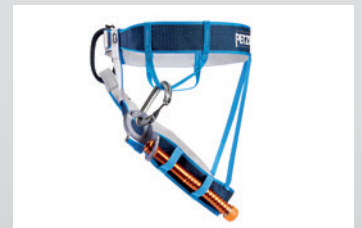

For ski touring or glacier travel, TOUR is the ideal harness. It's simple and durable architecture allow you to don the harness without removing your skis or crampons. It's equipped with two gear loops and retainers to carry your gear.

Can be donned with both feet on the ground while wearing skis or crampons.

Materials used in harness construction give it an excellent weight-to-durability ratio.

Two gear loops to carry gear and retainers with silicone interior on each leg loop, for carrying an ice screw.

- Designed for glacier travel and ski touring:
 - Can be donned with both feet on the ground while wearing skis or crampons
 - The DOUBLEBACK buckle and fastening strap are easy to operate, even with gloves
 - Comfortable to wear when walking or hanging
- Excellent weight-to-durability ratio:
 - FRAME Technology, with a central strap for the waistbelt and leg loops
 - Constructed with durable materials

- Simple design and capacity to carry gear:
 - Color coding allows you to instantly identify the inside and outside of straps
 - Single tie-in point
 - Two gear loops for carrying and organizing gear
 - Retainers with silicone interior on each leg loop, for carrying an ice screw

Product Specifications

- Material(s): Nylon, polyester, aluminum
- Certification(s): CE EN 12277 type C, UKCA, UIAA
- Harness comes in a protective carry bag

Petzl, Beyond the Standards

Petzl goes above and beyond the standard requirements for all our helmets, offering effective protection against falling objects and side, front, and rear impacts.

TOP AND SIDE PROTECTION: What Are the Levels of Protection?

1. Standard Protection

Standard protection against falling objects (such as rocks or ice)

EN 12492 / UIAA 106 Standard tests

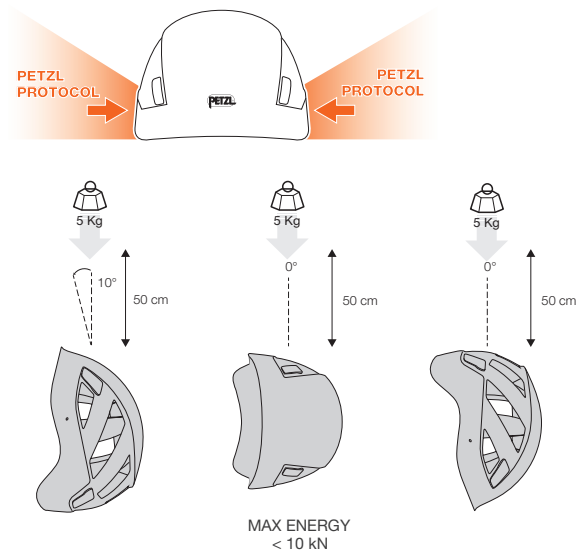

2. Enhanced Protection

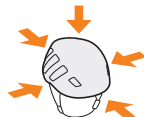

Enhanced protection against falling objects and against side, front, and rear impacts

Supplementary tests performed by Petzl

TOP AND SIDE PROTECTION = Standard Protection + Enhanced Protection

TOP AND SIDE PROTECTION

Climbing and mountaineering helmets with CE ski touring helmet certification

With protection against falling objects (EN 12492) and enhanced protection against lateral, front, or rear impact (Petzl's TOP AND SIDE PROTECTION label), Petzl helmets effectively protect the head during numerous activities: climbing, mountaineering, and now ski touring, where wearing a helmet is not yet the norm.

What are the different requirements for a ski touring helmet?

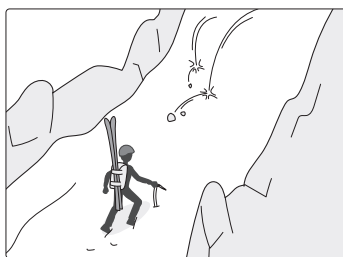

Ventilation:

In ski touring, the physical effort generated on the climb is considerable and requires appropriate gear. Only a lightweight, and most importantly, ventilated helmet can be comfortably worn from beginning to end of an outing.

Head Protection:

Throughout a ski touring day, climbing or descending, the skier may face any of the following risks:

- Rockfall:

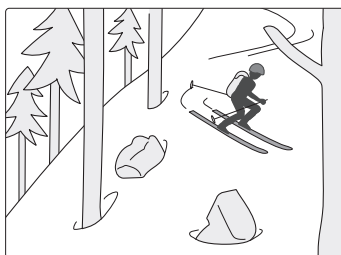

As in mountaineering, the skier may be exposed to rock or icefall, for example when climbing a couloir.

- Side, front, and rear impacts:

A fall while climbing on a steep or frozen slope above a rocky outcrop.

A fall while descending caused by terrain hazards: rocks, trees, ice blocks, crevasses, avalanches, or other possible hazards.

The best balance of ventilation and protection for the head will encourage participants to wear a helmet from beginning to end of an outing.

Why has Petzl pursued the creation of a new CE certification for ski touring helmets?

Currently there is no reference standard outlining the health and safety requirements for a ski touring helmet, unlike downhill skiing, which follows the guidelines of the EN 1077 class B standard.

Therefore, in order to obtain CE certification for a helmet used for ski touring, Petzl approached a certifying body to create a standard that takes into consideration the practice, the environment, and the dangers of ski touring.

This reference standard is based primarily on:

- The requirements of the mountaineering helmet standard (EN 12492), to provide rockfall protection, as well as maximum ventilation for comfort during ascents.
- Requirements for enhanced protection against lateral, front, and rear impacts (as described in the Petzl test protocol for the TOP AND SIDE PROTECTION label).

This reference standard is the PCSR (Protocol for ski touring helmets). It is public and available to other manufacturers for certification of their helmets.

BOREO®

Durable and versatile helmet with enhanced protection for climbing and mountaineering

A durable helmet for all of your adventures! BOREO is great for climbing, via ferrata, canyoning, and caving. The thick shell provides optimal resistance against impacts and scuffs. The design provides greater coverage for enhanced head protection, and is compact and ventilated for maximum comfort.

Design provides greater coverage and is lower in the back for enhanced protection against lateral, frontal, and rear impact (Petzl's TOP AND SIDE PROTECTION product label).

Optimized durability due to hybrid construction with thick ABS shell, EPP foam liner, and EPS foam liner.

Easy to adjust the fit with lateral webbing and a fully adjustable chinstrap.

- Enhanced protection and comfort:
 - Design provides greater coverage and is lower in the back for enhanced protection against lateral, frontal, and rear impact (Petzl's TOP AND SIDE PROTECTION product label)
 - Stable and comfortable to wear, with interior foam and a flexible headband that conforms to the shape of the head
 - Hybrid construction with thick ABS shell, EPP foam liner, and EPS foam liner, making the helmet durable
 - Ventilation holes increase air circulation and optimize comfort

- Easy to adjust the fit with lateral webbing and fully adjustable chinstrap
- Lightweight: 330 g in size M/L
- Durable:
 - Hard outer shell is impact- and scratch-resistant for optimal durability
 - Headband folds into the shell for easy storage and transport
- Versatile, for a variety of activities:
 - Ideal for climbing, mountaineering, caving, via ferrata, and canyoning
 - Two clips in front and a rear elastic band for securing a headlamp to the helmet

BOREO® CAVING

Caving helmet with mounting plates for DUO headlamp

Are you a fan of subterranean exploration? The BOREO CAVING helmet is specifically designed for caving. The design provides greater coverage for enhanced head protection, and is compact and ventilated for maximum comfort. Equipped with mounting plates at the front and rear, it allows you to mount your headlamp. The mounting plates allow you to choose between the DUO RL, DUO S, or DUO Z2 headlamps, according to your needs.

**TOP AND SIDE
PROTECTION**

Design provides greater coverage and is lower in the back for enhanced protection against lateral, frontal, and rear impact (Petzl's TOP AND SIDE PROTECTION product label).

Optimized durability due to hybrid construction with thick ABS shell, EPP foam liner, and EPS foam liner.

Easy to adjust the fit with lateral webbing and a fully adjustable chinstrap.

- Durable helmet designed for caving:
 - Design provides greater coverage and is lower in the back for enhanced protection against lateral, frontal, and rear impact (Petzl's TOP AND SIDE PROTECTION product label)
 - Hybrid construction with thick ABS shell, EPP foam liner, and EPS foam liner, making the helmet durable
 - Hard outer shell is impact- and scratch-resistant for optimal durability

- Stable when worn, with a flexible headband that conforms to the shape of the head
- Easy to adjust the fit with lateral webbing and fully adjustable chinstrap
- Can be equipped with a headlamp:
 - Front and rear plates mounted on helmet
 - Plates designed for mounting a DUO RL, DUO S, or DUO Z2 headlamp (headlamp not included)
 - Very easy to clean, with closed-cell comfort foam that does not absorb water or sweat

Product Specifications

- Material(s): ABS shell, expanded polypropylene (EPP) liner, expanded polystyrene (EPS) liner, polyester webbing
- Certification(s): CE EN 12492, UKCA, UIAA
- Product sold without headlamp

Petzl Belay/Rappel Devices: Standard Usage Techniques

Hand Positioning

This hand position is valid regardless of the device used.

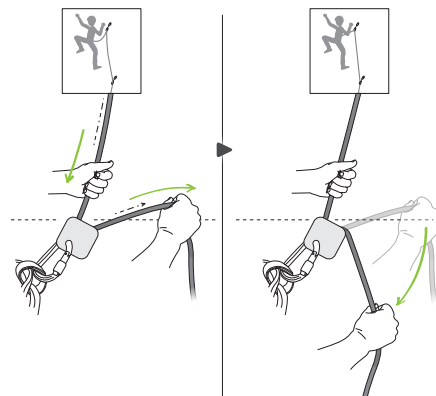

Your hand must never let go of the brake side of the rope.

Giving Slack

To give slack, your brake-side hand pushes the rope towards the device, creating slack; your other hand pulls the rope through the device.

To repeat this movement, slide your brake-side hand along the rope, without ever letting it go.

Taking Up Slack

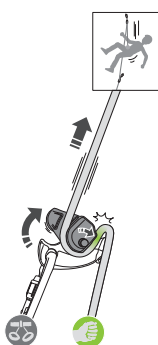

To take up slack, pull in the climber side of the rope and pull the brake side of the rope through the device. Never let go of the brake side of the rope.

Even though this hand sequence is common to all belay systems, **the position and the tightness of the grip of the brake-side hand are determined by the function and performance of the belay device.** These two features also affect the comfort of the belay.

Petzl Belay Systems: Two Types of Devices

Belay Devices with Cam-Assisted Blocking

• Working Principle

When a climber falls or rests, the rope tightens and the cam pivots to pinch the rope and block it.

• Advantages

- **Comfortable belay with cam-assisted blocking**, which minimizes the strength required of the brake-side hand and is especially useful for working a route: trying a move multiple times and holding the climber
- **Considerable leeway for brake-side hand position**, regardless of the angle between the climber-side and brake-side ropes
- **Exceptionally comfortable descent**, with an ergonomic handle that gives you progressive control of the rope feed

GRIGRI® +

Belay device with cam-assisted blocking and anti-panic handle, particularly suitable for learning and for intensive use

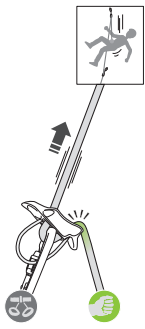

GRIGRI®

Belay device with cam-assisted blocking

Belay Devices and Descenders

Manual Braking Belay/Rappel Devices

- Working Principle

When a climber falls or rests, the brake hand grips the rope firmly and pulls it downward, the rope gets pressed into the braking grooves, thus increasing the friction until the rope stops.

- Advantages

- **Simple, compact, and lightweight**
- **Compatible with single, half, and twin dynamic ropes**
- **Comfortable rappels** due to efficiency of the braking grooves

REVERSO®

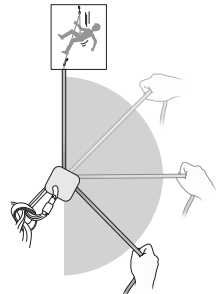

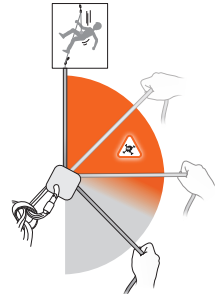

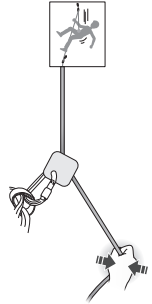

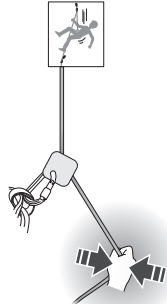

Versatile, lightweight belay/rappel device, for use with one or two rope strands and ability to belay a second climber from the anchor

VERSO

Compact, lightweight belay/rappel device, for use with one or two rope strands and for rappelling

Types of Ropes

Dynamic Ropes

Single Ropes ①

Ropes used as a single strand. These are mainly used for single-pitch climbing. Some climbers also use them for multi-pitch climbing or mountaineering.

Half ⑫ and Twin ⑩ Ropes

These are certified to two types of the CE EN 892 standard.

- Half Ropes: ropes used in pairs that may be clipped separately or together during progression. They are recommended for rappels and to facilitate rope drag management. They provide a back-up in case one of the strands is damaged by a falling rock or a sharp edge.
- Twin Ropes: ropes used in pairs that, unlike half ropes, must always be clipped together during progression. They are recommended for rappels.

Multi-Type Ropes

Multi-type ropes are certified to three types of the CE EN 892 standard. They may be used as a single, half, or twin rope.

Low Stretch Kernmantle Ropes

Low stretch kernmantle ropes have low elongation and are very resistant to abrasion. They are designed for caving, canyoning, rope ascent, or hauling, as well as for route development.

Manufacturing, Finish, and Treatment: Petzl Choices

UAAA Guide Dry Treatment

The UAAA Guide Dry treatment is our most complete water repellent treatment for frequent use in wet environments. It is especially useful when the rope is regularly used in extreme environments, such as for ice climbing or mountaineering. This treatment also improves the rope's resistance to dirt and abrasion.

The UAAA Guide Dry treatment meets the requirements of the UAAA Water Repellent test. The results of this test indicate water absorption of less than 2%.

The manufacturing process for UAAA Guide Dry treatment has two stages: the core is treated before the rope is braided and then the entire rope is treated in order to minimize water absorption and penetration of fine particles into the rope.

Duratec Dry Treatment

Dry treatment making the rope more resistant to water, dirt, and abrasion. Handling, grip, and other characteristics are maintained longer in cold, wet conditions.

EverFlex Treatment

Special treatment stabilizes the core strands and improves consistency. Provides excellent grip and consistent handling over time.

UltraSonic Finish

Ultrasonic welding bonds the core and sheath together at the rope ends. Gives greater durability and helps avoid frayed ends.

ClimbReady Coil

Special coil makes the rope ready to use. Helps avoid initial uncoiling mistakes and increases longevity.

Middle Mark

Indicates the middle of the rope for easier rope management.

Features of Petzl Carabiners

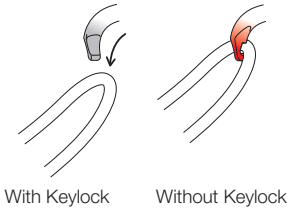

Fluid Interior Design

The fluid interior design of Petzl locking carabiners limits the risk of the nose getting caught while clipping and facilitates rotation of the carabiner.

H-Shaped Cross-Section

The carabiners have an H-shaped cross-section that provides an optimal strength-to-weight ratio, protects the markings from abrasion, and offers excellent handling, even when wearing gloves.

With Keylock

Without Keylock

Keylock System

To provide optimal efficiency, all Petzl carabiners use the Keylock system: the nose of the carabiner, where the body and gate meet, does not have a notch that could snag on anchors, ropes, harness equipment loops, or other gear.

Locking Carabiners

Shapes and Uses

D Shape

D-shaped carabiners are the most versatile and are efficient in a variety of different situations.

Pear Shape

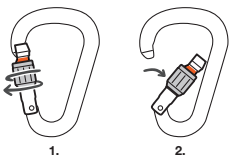

These carabiners have a large basket. They are recommended for carrying gear, tying a Munter hitch, or to use at anchor points.

Oval Shape

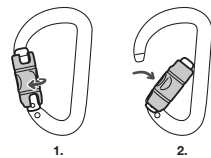

These carabiners are designed for use with pulleys and progress-capture pulleys.

Locking Systems

SCREW-LOCK

With an easy-to-open gate, it can be locked or not according to need. The red indicator provides a visual warning when the carabiner is unlocked. This system is ideal for harsh environments where contaminants (mud, ice) could cause an automatic locking system to jam.

TWIST-LOCK

Automatic locking system designed for very frequent use, it can be attached at the end of a lanyard or used to connect a GRIGRI belay device to a harness. Double-action opening by turning the sleeve, then pressing on the gate.

BALL-LOCK

Automatic locking system designed for frequent use. The triple-action opening consists of pressing on the sleeve, then pressing on the gate. The green button indicates when the gate is locked.

TRIACT-LOCK

Automatic locking system. The triple-action opening consists of raising and turning the sleeve, then pressing on the gate.

Carabiners and Quickdraws

Non-Locking Carabiners

MonoFil or Classic Gate

Very light due to MonoFil technology, these carabiners provide a very smooth clip. They also feature the Keylock system to help avoid snagging.

Classic straight gates have grooves for better grip when opening the carabiner.

Different Sizes

Larger carabiners are easier to handle and clip, even while wearing gloves. Smaller carabiners are more lightweight and compact.

Quickdraws

Quickdraw slings are available in two or three lengths to reduce rope drag in certain situations, such as small roofs, overhangs, or offset anchor points.

All quickdraws come with a STRING to maintain the proper orientation of the carabiner and facilitate clipping.

Choosing Your Petzl Quickdraws

ANGE FINESSE For low weight

Designed for climbing situations where every gram counts, ANGE FINESSE quickdraws are ultra-light and compact. Available in two lengths and two carabiner sizes.

SPIRIT EXPRESS For greater versatility

A lightweight yet ergonomic solution, SPIRIT EXPRESS quickdraws are ideal for working routes at the crag or on multi-pitch climbs. Available in three lengths.

DJINN AXESS For optimal durability

Combining durability with good handling, DJINN AXESS quickdraws are designed for rock climbing. Available in three lengths.

2023**

SPIRIT

Lightweight, versatile carabiner for sport climbing

The SPIRIT carabiner is the benchmark for sport climbing and working routes. Bent and straight gate designs are optimized for different uses. The Keylock system prevents the carabiner from snagging when clipping and unclipping. Its standard size doesn't compromise on weight; in fact, its excellent weight-to-performance ratio means you can take it with you on different types of terrain like single pitch, multi-pitch, alpine rock, or ice. Available in two versions: straight gate or bent gate. The bent gate version is available in six colors.

The straight gate design offers an excellent grip and makes clipping and unclipping easier.

The bent gate allows you to efficiently clip the rope.

The Keylock system is designed to avoid snagging on a gear loop, bolt hanger, or rope.

- Easy to clip and unclip:
 - Keylock system is designed to avoid snagging on a gear loop, bolt hanger, or rope
 - Straight gate design offers an excellent grip and makes clipping and unclipping easier
 - Bent gate design allows you efficiently clip the rope
 - Flat carabiner spine offers excellent stability when holding it in your hand or pinch clipping

- Excellent weight-to-performance ratio: standard-sized, lightweight, and compact carabiner, weighing only 37 g
- Versatile:
 - Easier to grab and clip for sport climbing
 - Lightweight, for multi-pitch climbs and mountaineering
 - Easy to use with gloves for mountaineering
- Available in two versions: straight gate (gray) and bent gate (gray, violet, green, red, yellow, or blue)

Product Specifications

- Material(s): Aluminum

EXPRESS

Ergonomic quickdraw sling with STRING

The EXPRESS quickdraw sling is perfect for working a route. The ergonomic shape makes it easier to grab. The STRING helps stabilize the carabiner when clipping and protect the carabiner attachment loop from wear. It is available in three lengths (11, 17, and 25 cm) to adapt to different uses and better manage rope drag.

- Ergonomic, lightweight, and durable quickdraw sling:
 - Ergonomic shape offers excellent grip
 - Excellent weight-to-performance ratio
 - For intensive use
- Rope end of the quickdraw is equipped with a STRING to stabilize the carabiner when clipping and help protect the carabiner attachment loop from wear
- Available in three lengths: 11, 17, and 25 cm

SPIRIT EXPRESS

Lightweight, versatile quickdraw for sport climbing

The benchmark for sport climbing and working routes! The SPIRIT EXPRESS quickdraw is lightweight, ergonomic, and versatile. The SPIRIT carabiners are designed to optimize use. The Keylock system helps prevent the carabiner from snagging when clipping and unclipping. Ergonomic, the EXPRESS quickdraw sling is the perfect shape to grab with your hand. The excellent weight-to-performance ratio allows you to adventure on different types of terrain like single pitch, multi-pitch, alpine rock, and ice. It is available in three lengths (11, 17, and 25 cm) to adapt to different uses and better manage rope drag.

- Easy to clip and unclip:
 - Carabiners feature the Keylock system, designed to avoid snagging on a gear loop, bolt hanger, or rope
 - Straight gate design offers an excellent grip and makes clipping and unclipping easier
 - Bent gate design allows you efficiently clip the rope
 - Flat carabiner spine offers excellent stability when holding it in your hand or pinch clipping
 - The STRING quickdraw sling protector stabilizes the carabiner when clipping
 - The ergonomic shape of the EXPRESS quickdraw sling makes it easier to grab
- Excellent weight-to-performance ratio
- Versatile:
 - Easier to grab and clip for sport climbing
 - Lightweight, for multi-pitch climbs and mountaineering
 - Easy to use with gloves for mountaineering
- Available in three lengths: 11, 17, and 25 cm

Product Specifications

- Major axis strength: 23 kN
- Minor axis strength: 7 kN
- Open gate strength: 8 kN
- Gate opening:
 - 21 mm straight gate
 - 24 mm bent gate
- Material(s): Aluminum carabiner, nylon sling, TPE (thermoplastic elastomer) STRING

DJINN

Durable carabiner for sport climbing

The DJINN carabiner is durable, making it especially suited for sport climbing. A wide contact surface with the rope and the bolt hanger optimizes rope glide and enhances durability. The large size makes it easier to use and the bent gate makes clipping the rope easier. The Keylock system prevents the carabiner from snagging when clipping and unclipping. Available in two versions: straight gate or bent gate.

The straight gate design offers an excellent grip and makes clipping and unclipping easier.

Bent gate makes clipping the rope easier.

The Keylock system is designed to avoid snagging on a gear loop, bolt hanger, or rope.

- Extremely durable:
 - Wide contact surface with the rope and bolt hanger for better rope glide and reduced wear on the carabiner
 - Excellent ratio between functionality, durability, and weight at only 44 g
- Easy to clip and unclip:
 - Large carabiner suited to bigger hands or for use while wearing gloves
 - Keylock system is designed to avoid snagging on a gear loop, bolt hanger, or rope

- Straight gate design offers an excellent grip and makes clipping and unclipping easier
- Large straight gate opening makes the carabiner easy to use
- Bent gate makes clipping the rope easier
- Flat carabiner spine offers excellent stability when holding it in your hand or pinch clipping
- Available in two versions: straight gate (gray) or bent gate (turquoise or violet)

DJINN AXESS

Durable quickdraw for sport climbing

The go-to quickdraw for a day at the crag! The DJINN AXESS quickdraw is durable, making it ideal for sport climbing. The DJINN carabiners have a wide contact surface with the rope and the bolt hanger, optimizing rope glide and enhancing durability. The large size of the carabiners make them easy to use. The bent gate design allows you to easily clip the rope. The Keylock system helps prevent the carabiner from snagging when clipping and unclipping. It is available in three lengths (11, 17, and 25 cm) to adapt to different uses and better manage rope drag.

- Extremely durable:
 - Wide contact surface with the rope and bolt hanger for better rope glide and reduced wear on the carabiner
 - Durable sling with STRING to protect the webbing from abrasion
 - Excellent ratio between functionality, durability, and weight: 11 cm quickdraw weighs 103 g
- Easy to clip and unclip:
 - Large carabiners suited to bigger hands or for use while wearing gloves
 - Carabiners feature the Keylock system, designed to avoid snagging on a gear loop, bolt hanger, or rope
 - Straight gate design offers an excellent grip and makes clipping and unclipping easier
 - Large straight gate opening makes the carabiner easy to use
 - Bent gate makes clipping the rope easier
 - Flat carabiner spine offers excellent stability when holding it in your hand or pinch clipping
 - STRING quickdraw sling protector stabilizes the carabiner when clipping
- Available in three lengths: 11 (turquoise or violet), 17 and 25 cm

Product Specifications

- Major axis strength: 23 kN
- Minor axis strength: 8 kN
- Open gate strength: 9 kN
- Gate opening:
 - 24 mm straight gate
 - 27 mm bent gate
- Material(s): Aluminum carabiner, polyester sling, TPE (thermoplastic elastomer) STRING
- Certification(s):
 - Carabiner: CE EN 12275 type B, UIAA
 - Sling: CE EN 566, UIAA

Modular Ice Axes With the ALPEN ADAPT System

With the ALPEN ADAPT system, all ice axes for technical mountaineering, ice climbing, and dry tooling have a modular head that can be adapted to the specific demands of the terrain. Certain picks and handrests are also modular.

Ice Axe Use and Standards

The range of Petzl ice axes is composed of different families:

- Ice axes for glacier travel and ski mountaineering
- Classic mountaineering ice axes
- Technical mountaineering ice axes
- Ice axes for ice climbing and dry tooling

Each one of these ice axes has characteristics specific to its use on the terrain, such as the length, shape of the shaft, and shape of the pick.

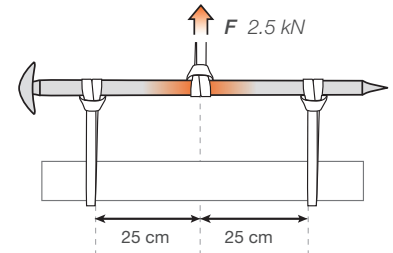

Standards

In terms of standards, ice axes are divided into two types: Type 1 and Type 2. These types make a distinction between basic and technical ice axes.

This distinction is made using different tests:

- Shaft center-load pull test
- Shaft insertion strength test
- Pick levering test

These tests are detailed in the diagrams here.

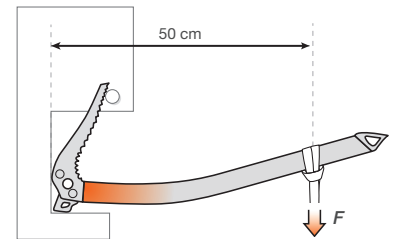

Pull Test

Type 1 Ice Axes

These ice axes have a lower strength requirement than Type 2 ice axes. They are generally used for skiing, glacier travel, and classic mountaineering. For Type 1 ice axes, no marking is required, but if there is any, the marking is: B.

Type 2 Ice Axes

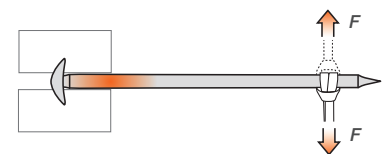

These ice axes have the highest strength required by the standard. They are primarily used for technical mountaineering, ice climbing, and dry tooling. For Type 2 ice axes, markings are required. The marking is: T.

F - Type ① 0.6 kN

F - Type ② 0.9 kN

Shaft Insertion Strength Test

F - Type ① 42 Nm

F - Type ② 60 Nm

Levering Test

KIT

Ice Climbing with Tanja & Hlke Schmitt and Matthias Scheerer on the Storstampen pillar ice fall in Norway © 2020 Petzl Distribution - Mathis Dumas

Petzl crampons are designed for moving over different types of terrain. Each one is designed for a specific use. However, their versatility also enables efficient movement in mixed terrain, commonly encountered in alpine environments.

Fabian Buhl © 2021 Petzl Distribution - La Roche

Petzl ascenders are designed for ascending fixed ropes, but they also have other uses including helping a second climber who is having trouble, hauling a victim out of a crevasse or up a wall, or self-belaying. For this, there are several types of ascenders: hand ascenders, chest ascenders and back-up ascenders.

Types of Petzl Ascenders

Hand Ascenders

Because of their excellent handling, these ascenders are mainly used for ascending ropes. Their design also provides various ways to install the device on a rope to make a pulley system or haul a pack.

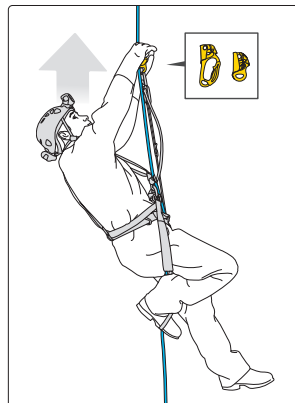

ASCENSION

Handled ascender with a comfortable, powerful grip

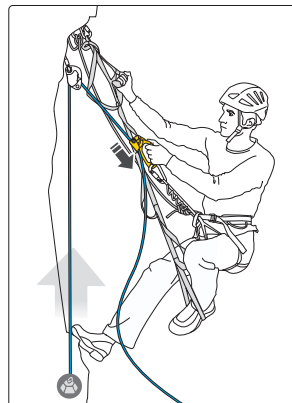

BASIC

Compact and lightweight ascender

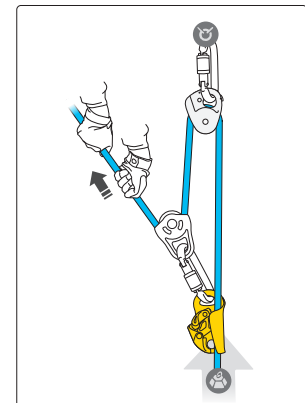

Rope ascent with hand ascender installed above the user

Examples of other ways to use hand ascenders

Hauling with an ASCENSION handled ascender

Pulley system with a BASIC ascender

Chest Ascenders

Installed directly to the harness, they are used with a hand ascender for ascending a rope.

CROLL® S

Reinforced chest ascender for thin to medium-diameter ropes

CROLL® L

Chest ascender for large-diameter ropes

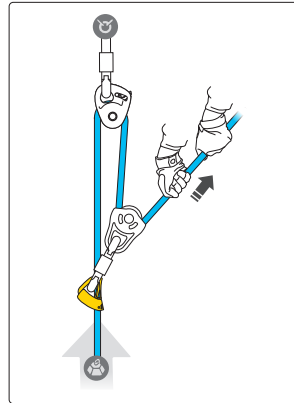

Ascenders

Back-Up Ascender

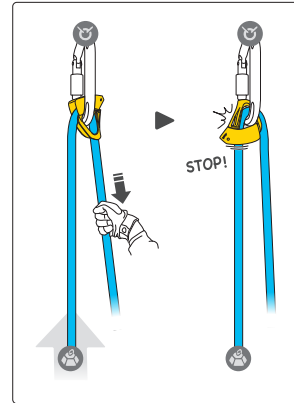

TIBLOC

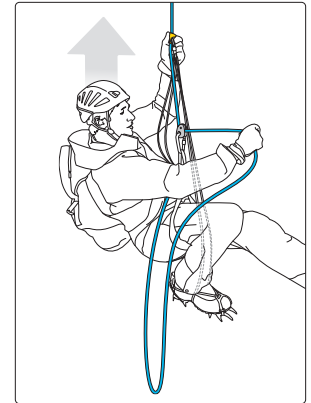

Ultralight and compact, TIBLOC is a back-up ascender that adapts readily to situations other than ascending ropes, such as pulley systems or progress capture.

Pulley System

Progress Capture

Ascending a Rope

Ascender Accessories

For greater efficiency and convenience when ascending, Petzl offers accessories for use with hand and chest ascenders.

PANTIN
Foot Ascender

FOOTAPE
Adjustable webbing foot loop

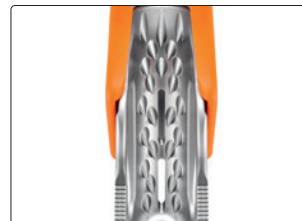

FOOTCORD
Adjustable foot loop made with HMPE cord for greater versatility and optimal durability

Locking Systems

Rope blocking with toothed cam (all ascenders except TIBLOC)

The teeth initiate the locking action and the cam pinches the rope. Blocking is optimal in a variety of conditions, including when the rope is wet, frozen, or muddy, all while reducing the effort needed to slide the device upward.

Rope blocking via carabiner compression and toothed frame (TIBLOC)

The carabiner compresses the rope into the toothed frame. The self-cleaning slot enables use in a variety of conditions, including when the rope is wet, icy, or muddy. Ultra-light solution using only the teeth and carabiner to block the rope.

KIT

Lanyards are essential in many activities including via ferrata, caving, and canyoning. Petzl offers lanyards with or without energy absorbers, that respond to the specific needs of these activities.

Via Ferrata Lanyards

- **For participants weighing 40 to 120 kg**

SCORPIO lanyards meet the EN 958: 2017 standard, authorizing use by those weighing between 40 and 120 kg.

Their energy absorber is composed of tear-webbing. In the event of a fall, the tearing of the energy absorber reduces the impact of the fall on the user. This tearing takes place progressively.

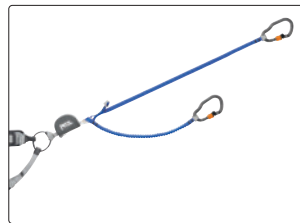

Concept:

- The length of tearing required for shock absorption depends on the energy generated by the fall, which is determined by the length of the fall and the weight of the user
- The greater the energy, the longer the deployment

- **Comfortable and durable**

The lanyard is closely connected to the harness, making it more comfortable to use.

Two elasticized arms have long extension capacity to adapt to different heights. Their high-modulus polyethylene (HMPE) construction makes the arms extremely durable.

- **SCORPIO VERTIGO for less weight and more durability**

The VERTIGO WIRE-LOCK carabiner has an auto-locking system. The WIRE-LOCK system increases the lifetime of the carabiner when used intensively.

- **SCORPIO EASHOOK, for an even more comfortable experience**

The EASHOOK carabiner features an auto-locking system. It offers excellent handling and is suitable for all hand sizes.

The anti-twist system helps prevent the arms from tangling and makes progression more comfortable.

Via Ferrata Kits: Essential for Adventure

KIT VIA FERRATA VERTIGO

KIT VIA FERRATA EASHOOK

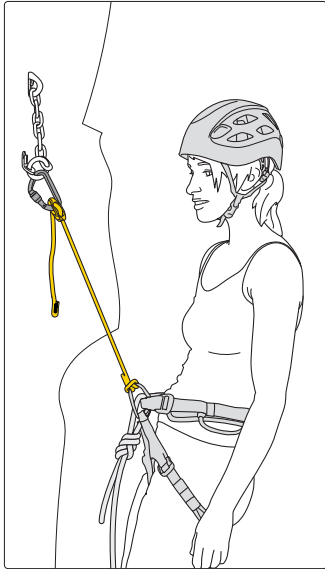

Each kit contains a SCORPIO VERTIGO or SCORPIO EASHOOK lanyard, CORAX harness, and BOREO® helmet.

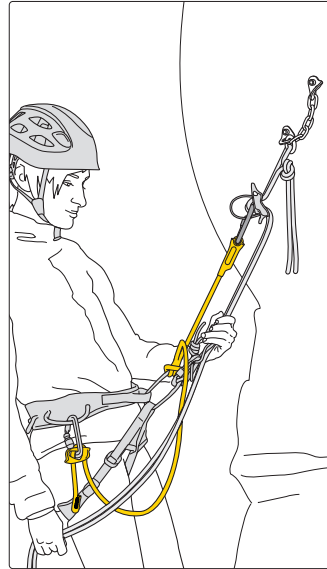

Lanyards for Climbing, Mountaineering, Caving, and Canyoning

Petzl offers many types of lanyards including dynamic, static, single, double, asymmetrical, and adjustable.

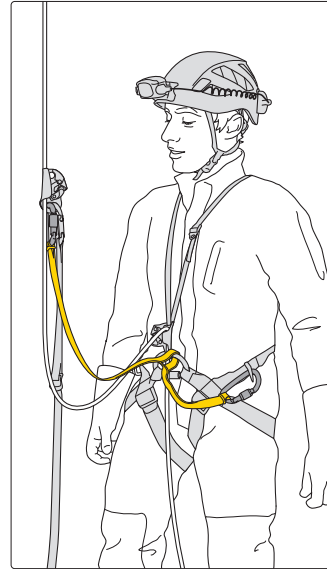

• Lanyards Designed for Different Uses

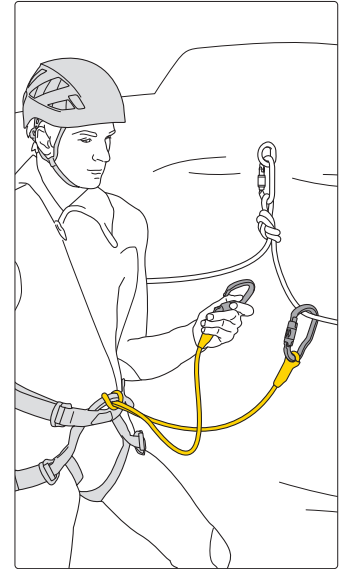

The CONNECT ADJUST single lanyard allows the user to position him/herself at an anchor.

The DUAL CONNECT ADJUST and DUAL CONNECT VARIO double lanyards can be used to tether oneself when setting up a rappel system while climbing or mountaineering.

The asymmetrical SPELEGYCA double lanyard has multiple different uses when caving, such as tethering oneself, passing intermediate anchors, or ascending a rope.

The DUAL CANYON CLUB, DUAL CANYON GUIDE, and DUAL CONNECT VARIO lanyards allow positioning at the anchor and progression along a lifeline when canyoning.

• Length can be selected using the ADJUST rope adjuster

Lanyards equipped with the ADJUST rope adjuster allow for quick and precise length selection of the adjustable arm. This adjustment option allows optimal positioning when at the anchor.

• Versatile DUAL CONNECT VARIO lanyard

This lanyard may be used for tethering oneself, or for installing a rappel system or equalized belay station.

SPLIT

Rope bag

Transport your rope with care! With a 25-liter capacity, the SPLIT rope bag can carry up to 120 m of rope. The removable tarp allows you to designate a space for your rope. The roll-top closure system makes it more compact and easier to carry. With adjustable shoulder straps, it can be carried on your back, hanging by your waist, or over another pack. The SPLIT bag provides effective protection against dust and abrasion.

Bag and protective rope tarp can be separated for easier rope management.

Two possible closure methods: on top or on the front face to create an extra handle.

Adjustable shoulder straps give you multiple carrying options: on the back, in front, or over another pack.

- Rope bag that can easily carry up to 120 m of rope:
 - Bag and TARP protective rope tarp can be separated to make rope management easier
 - Volume of 25 liters, carrying up to 120 m of rope
 - Easy to pack without needing to coil the rope
- Easy and functional:
 - Adjustable shoulder straps give you multiple carrying options: on the back, in front, or over another pack
 - Compact shape doesn't get in the way when moving and allows you to see your feet when carrying it in front
 - Four color-coded handles at the corners of the tarp to tie rope ends

- Roll-top closure makes it more compact
- Two possible closure methods: on top or on the front face, to create an extra handle
- Two color-coded handles to easily move the bag from the base of one route to another
- Effectively protects the rope from dust and dirt:
 - Bottom of the bag is reinforced and shoulder straps are easy to clean off
 - Protective tarp provides a 140 x 140 cm clean area for ropes
 - Orange borders allow you to quickly see the tarp
 - Durable exterior fabric and coated canvas tarp for improved abrasion resistance

Product Specifications

- Volume: 25 liters
- Weight: 600 g
- Material(s): Polyester, nylon

Lighting performance as defined by the ANSI/PLATO FL 1 protocol

Petzl has chosen to comply with the ANSI (American National Standards Institute) protocol to measure and demonstrate the lighting performance and burn times of our headlamps. This voluntary move allows users to easily compare the lighting performance and burn times of different headlamp models using standardized criteria.

Lighting Performance: How Is It Measured?

- **Brightness (lumens)**

This measurement is taken between 30 and 120 seconds after the headlamp is turned on. It indicates the maximum light output, when the lamp is first turned on, using new batteries.

- **Lighting distance (meters)**

This is the maximum distance between the lamp and the location where only 0.25 lux of illumination remains. The measurement is taken when the lamp is turned on, using new batteries. Lighting distance depends directly on brightness, but mainly on the shape of the beam.

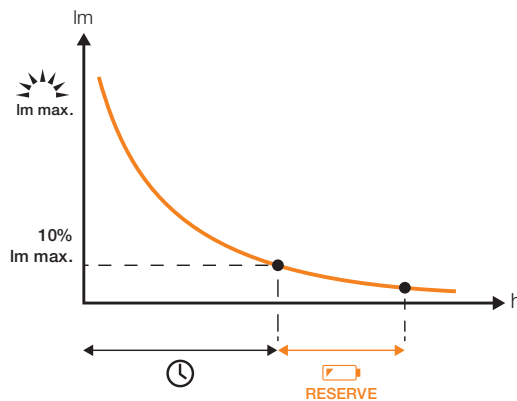

- **Burn time (hours)**

This corresponds to the length of time during which lighting is optimal. It is measured 30 seconds after the lamp is turned on and for as long as the lamp takes to drop to 10 % of maximum light output.

- **Reserve lighting (outside scope of ANSI/PLATO FL 1 protocol)**

In addition to these measures, Petzl offers reserve lighting. Reserve lighting provides minimum light level for walking. However, the light may not be sufficient for fast-paced activities (such as running, mountain biking, or skiing).

Example of a light output curve for a STANDARD LIGHTING headlamp.

Watertightness: What do the IP ratings on Petzl headlamps mean?

A headlamp's resistance to solids and/or liquids is indicated by its IP rating. This index classifies the level of protection offered by equipment against intrusions by solids (e.g. dust) and liquids (e.g. water, oil).

Rating complies with the majority of headlamp uses, in rain, snow, or humidity. All Petzl headlamps are at least IPX4 rated (weather resistant).

Rating indicates the headlamp is waterproof to in up to 1 meter of fresh water for 30 minutes. The e+LITE headlamp is IPX7 rated.

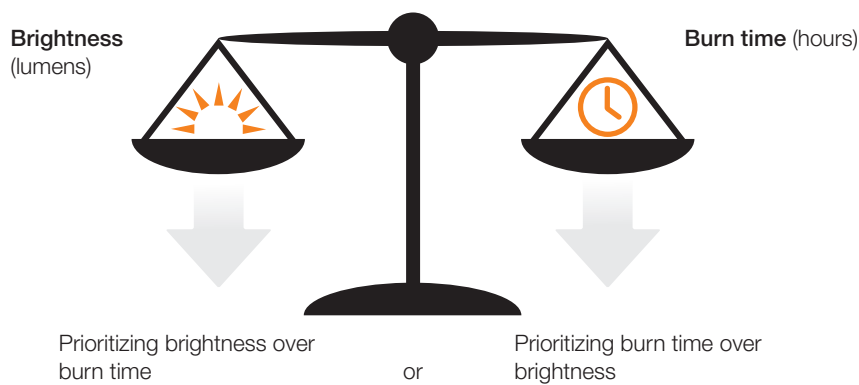

Rating indicates the headlamp is dustproof and waterproof in up to 1 meter of fresh water for 30 minutes. DUO RL, DUO S, DUO Z2, ARIA 2, and ARIA 1 headlamps are rated IP67.

Optimizing Headlamp Performance With Different Lighting Levels

Petzl headlamps are designed to meet your needs for burn time and/or brightness. The choice is easy with three brightness levels that correspond to the type of activity (except DUO headlamps):

- For a shorter activity requiring brightness, choose the MAX POWER level, which maximizes lumens over the first few hours
- For a longer activity requiring good burn time management, choose the STANDARD level, which offers a lumen/time balance
- For an activity requiring little movement (reading, camping), choose MAX BURN TIME, which optimizes battery life and provides moderate lighting for a longer time

Example of table that provides performance information on headlamp packaging:

		ANSI/PLATO FL 1			
					RESERVE
 STANDARD LIGHTING	MAX BURN TIME	7 lm	10 m	100 h	—
	STANDARD	100 lm	40 m	10 h	20 h*
	MAX POWER	350 lm	70 m	2 h	20 h*

*Reserve **0,25 lux - 4 m**

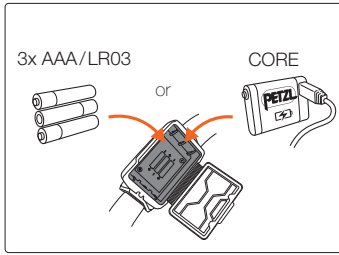

KIT

Petzl Technologies, a Step Ahead

Hybrid Headlamps: Choose the Power Source That Meets Your Needs

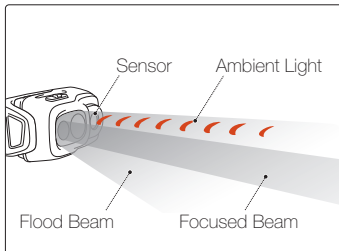

The HYBRID CONCEPT design allows Petzl's compact headlamps to run on either the CORE rechargeable battery or three AAA/LR03 batteries without an adapter.

- CORE rechargeable battery is an economical solution for frequent and/or intensive use
- AAA/LR03 batteries for occasional use with very long burn time

Available on IKO® CORE, IKO®, ACTIK® CORE, ACTIK, ARIA 2, ARIA 1, TIKKA® CORE, TIKKA®, TIKKINA® and TIKKID® headlamps.

Beyond Power... Intelligence

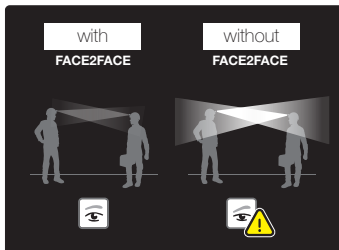

This exclusive technology developed by Petzl instantly provides the right lighting at the right time, without need for manual operation. Burn time is optimized so you can remain focused on the activity. REACTIVE LIGHTING® technology provides:

- Intelligent lighting
- Hands-free lighting for greater convenience and performance
- Longer burn time

Available on DUO RL, NAO® RL, and SWIFT® RL headlamps.

Face-to-Face Without Blinding

Once activated, the FACE2FACE function triggers a sensor that detects other DUO headlamps within 8 meters and automatically dims the lighting whenever they face each other. The light returns to its original intensity once the other headlamp is no longer in its line of sight.

Available on DUO S and DUO Z2 headlamps.

Ergonomic and Comfortable, With the AIRFIT® Headband

This water-repellent headband resists sweat and rain. The thin headband considerably reduces the area of contact and improves air circulation during dynamic activities.

Available on IKO® CORE and IKO® headlamps.

Brightness is the total quantity of light emitted by a lamp. It is expressed in lumens. The greater the quantity of light, the better you see. The value indicated is that of the most powerful lighting level.

Red and/or white strobe lighting allows you to signal and be more easily located, for example in an emergency.

Lighting distance is linked to brightness and beam shape. It is expressed in meters and indicates the range of usable lighting. The value indicated is the maximum value.

Rear red lighting on the rechargeable battery to signal your presence.

Burn time expresses the length of time a headlamp functions with power sufficient for carrying out an activity. It is expressed in hours. The value indicated is the maximum value.

Reflective components for night visibility.

Reserve lighting provides minimum light level for walking. However, the light may not be sufficient for fast-paced activities (such as running, mountain biking, or skiing).

LOCK function to avoid accidentally turning it on during transit or storage.

Flood beam designed for proximity lighting, to see up close or around the feet. The wide angle provides a very wide and comfortable field of vision.

Petzl headlamps that work with rechargeable batteries.

Mixed beam consists of a flood beam and a focused component, allowing both proximity lighting and longer-range vision for moving around.

Petzl headlamps that work with regular batteries (included).

Narrow beam allows focused lighting on a target in order to see objects or people at a distance.

The IP rating on a headlamp indicates the degree to which it is waterproof and dustproof.

Red lighting for more comfortable night vision. This lighting allows good vision without blinding the user or members of a group.

The weight indicated is that of the headlamp with its energy source (regular or rechargeable batteries).

Red, green, and blue lighting allows the user to better see contrasts within the lit object in certain situations (useful when reading a map, hunting, or fishing).

The energy stored by the reflector surrounding an LED is released in the form of a phosphorescent glow. This glow allows a headlamp that is turned off to be found, even in the dark.

SWIFT® RL

Compact, ultra-powerful and rechargeable headlamp featuring REACTIVE LIGHTING® technology. 1100 lumens

Casting 1100 lumens at a weight of only 100 g, SWIFT® RL is the must-have headlamp for your outdoor activities. Using REACTIVE LIGHTING® technology, a sensor analyzes the ambient light and automatically adjusts brightness to your needs. The headband is reflective to remain visible at night. Its split construction gives you excellent stability during dynamic and intense activities such as mountaineering, trail running, and skiing. SWIFT® RL is intuitive to use, with a single button that easily controls all functions: ON/OFF, lighting modes, brightness, and locking. If necessary, you can also use the continuous or strobe red lighting. It is rechargeable, with a five-level gauge that allows you to monitor the battery charge level.

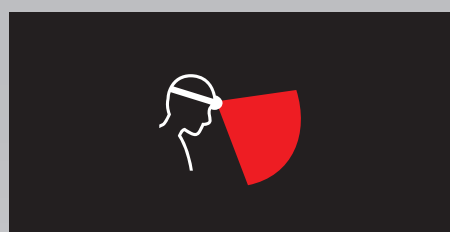

Reactive LIGHTING

Longer burn time, greater visual comfort, and less manual operation with REACTIVE LIGHTING® mode: the light sensor automatically adjusts brightness and beam pattern, optimizing battery life.

Rechargeable via USB-C port.

Continuous or strobe red lighting to preserve night vision and to signal your location, especially in emergency situations.

- Ultra-powerful and intelligent headlamp:
 - 1100 lumens allowing you to see up to 155 meters away
 - Choice of two lighting modes, selected with a long hold: REACTIVE LIGHTING® or STANDARD LIGHTING
 - Longer burn time, greater visual comfort and less manual operation with REACTIVE LIGHTING® mode, which allows the light sensor to automatically adjust brightness and beam pattern, optimizing battery usage
 - Minimum burn time of 5 hours in REACTIVE LIGHTING® mode (STANDARD level), built to power through long activities
 - Mixed beam meets the need for high-performance lighting during outdoor activities: proximity or distance vision
 - Continuous red lighting to preserve night vision and increase comfort when reading, without blinding those around you
 - Strobe red lighting to be visible and to signal your location, especially in emergency situations
- Reflective headband to remain visible at night
- Compact and lightweight:
 - Only 100 g
 - Ergonomic and adjustable headband provides the ideal fit, with split construction (Petzl patent); the headband can also be detached and washed
 - Ultra-light storage pouch allows it to be transformed into a lantern
- Simple to use:
 - Single button to control of all functions: ON/OFF, lighting modes, brightness, and locking
 - LOCK function to avoid accidentally turning on the lamp during transit or storage, or to lock lighting settings during your activity

- Lithium-Ion 2350 mAh battery, rechargeable via USB-C port, with battery charge indicator
- Five-level gauge for precise monitoring of the battery charge level
- The lamp can be tilted upward to see ahead when worn around the neck or tilted downward when worn on a helmet.

Product Specifications

- Brightness: 1100 lumens (ANSI FL 1 STANDARD)
- Weight: 100 g
- Technology: REACTIVE LIGHTING® or STANDARD LIGHTING
- Beam pattern: Mixed (flood and focused)
- Power: 2350 mAh Lithium-Ion rechargeable battery (included)
- Charging time: 6 h
- Water resistance: IPX4 (weather-resistant)
- Certification(s): CE

2023**

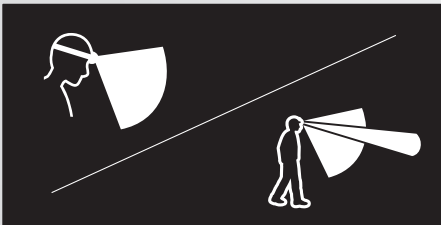

ARIA 2

Compact and powerful headlamp, ideal for hunting and fishing. White, red, green, or blue lighting to preserve night vision and provide stealth. 450 lumens

Designed for activities where stealth is key (such as hunting, fishing, and nature watching), the ARIA 2 headlamp provides 450-lumen brightness and a mixed beam for comfortable proximity lighting and movement. Waterproof and easy to use with a single button, it also features red, green, and blue lighting to preserve night vision. ARIA 2 comes with three standard batteries and is also compatible with the CORE rechargeable battery, with its HYBRID CONCEPT design.

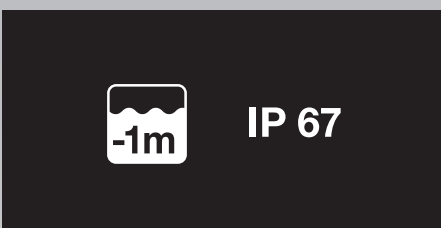

Hybrid
CONCEPT®

Wide, uniform beam so you can comfortably see up-close or at your feet, and mixed beam (flood and focused) providing proximity and distance vision for movement.

Red, green, and blue lighting preserves night vision and provides stealth.

Dustproof and waterproof (in 1 meter of water for 30 minutes).

- Compact headlamp for hunting and fishing:
 - Flood and mixed beam (flood and focused) for proximity and distance vision
 - Red, green, and blue lighting preserves night vision and provides stealth
 - Color lighting is continuous or strobe, according to user needs
 - Dustproof and waterproof (in 1 meter of water for 30 minutes)
 - Lightweight, compact, and bright: 450 lumens and only 106 g
 - Easy to use:
 - Single button for quick and easy selection of brightness or light color
 - Three white lighting levels: MAX BURN TIME, STANDARD (better power/burn time balance), and MAX POWER
 - Battery charge indicator shows the battery level each time lamp is turned on or off
 - Plate allows you to easily tilt the lamp in desired direction
 - Detachable, washable headband
 - LOCK function prevents the lamp from turning on during transit or storage
 - Versatile:
 - HYBRID CONCEPT design: ARIA 2 comes with three AAA/LR03 batteries and is also compatible with the CORE rechargeable battery (not included); it automatically detects the energy source and adjusts lighting performance

- Compatible with the HELMET ADAPT and BIKE ADAPT 2 mounts, so you can mount the lamp on a helmet or a bicycle

Specifications

- Brightness: 450 lumens (ANSI/PLATO FL 1)
- Weight: 106 g
- Beam pattern: Flood or mixed
- Power: Three AAA/LR03 batteries (included) or CORE rechargeable battery (available as accessory)
- Battery compatibility: Alkaline, lithium, or rechargeable Ni-MH
- Certification(s): CE, UKCA
- Water resistance: IP67

R1 Extension Cord

Extension cord for NAO® RL headlamp

The R1 extension cord makes it possible to remove the NAO® RL battery from the headband. This allows you to keep it in a warm place, protecting the battery and preserving burn time. It's ideal for cold weather or to reduce the weight carried on your head!

- Allows you to carry the rechargeable battery pack for the NAO® RL separately, reducing weight on the head
- Increases battery life by allowing you to keep the rechargeable battery in a pocket, protected from cold
- Ideal for trail running, cross-country skiing, and mountaineering

Product Specifications

- Length: 110 cm
- Weight: 50 g

Rope Access and Confined Space

Rope access work often involves environments at significant height. Work done in confined spaces entails challenges related to the lack of space and lack of means of autonomous progression.

© 2020 Petzl Distribution - Marc Daviet - Champier SARL

Tree Care

Not all tree work can be done using exterior means such as elevated platforms or ladders. In this case, to move and work, the arborist uses rope progression techniques.

© 2021 Petzl Distribution - Vuedici.org - JADE SEGENS - Site de Roussillon

Framing and Roofing

At this type of work site, the risk of slipping and falling is higher. A fall-arrest system must therefore be installed to guard against these hazards.

© 2021 Petzl Distribution - Vuedici.org - TopShelf

Energy and Networks

These environments are characterized by structures such as towers, antennas, and wind turbines. The means of progression are varied and dependent directly on the structure, which does not always have a fall-arrest system in place.

© 2019 - Petzl Distribution - ROH - SLC FIRE DPT

Self-Rescue

A firefighter who finds themselves trapped inside a burning structure must be prepared for self-evacuation and have the appropriate equipment on hand.

© 2019 - Petzl Distribution - Rémi Flament - SAS Michel Besson

Hazardous Areas

Where there is risk of explosion, the hazardous locations are classified by zone (ATEX and/or HAZLOC). All of the materials used must therefore conform with current regulations for this type of zone.

© 2021 Petzl Distribution - Vuedici.org - CNEAS/CNS Lannemezan

Technical Rescue

Every day, rescue workers must adapt to new and dangerous situations, and require significant material support. Petzl offers innovative, versatile, and high-performance solutions to facilitate these missions.

© 2020 Petzl Distribution - Rémi Flament - ENERCON

Maintenance and Workshops

Professionals working at concerts and shows, in workshops, in maintenance, or in the energy and networks sector all require practical and lightweight headlamps on a daily basis.

© 2019 - Petzl Distribution - Fred Maire / Hans Lucas - 17° RGP

Tactical, Special Forces

Tactical operations in a hostile environment require maximum safety in every situation, so being able to count on the quality and performance of the equipment is essential.

Exploring New Horizons

Whether climbing a distant summit or exploring the depths below, our desire to access the inaccessible inspires an enduring passion to fulfill our dreams. For over 15 years, the Petzl Foundation's mission has been to support and initiate public interest projects through its activities in mountainous and vertical domains; projects that help bring balance to humankind's place in our natural, cultural, and economic environments.

Contributing to enhanced understanding of best practices in the vertical world.

Mont Blanc Massif — Restoration of a Historic Mountain Refuge

Until 1973, mountaineers attempting to climb the Grépon departed from the bivouac at Tour Rouge, which sat on a ledge at an altitude of 2,820 meters. With room for eight, this small shelter made it possible to climb the first delicate pitches at first light, and then descend the Nantillons glacier in better conditions during the day.

On July 21, 2021, more than 50 years after a large snow mass caused the refuge to collapse, it was reconstructed with the help of a volunteer group of alpinists guided by Jean-Sébastien Knoertzer. The refuge is now equipped with mattresses, blankets, dishes, and gas. A new route to access the refuge has been established to climb the smooth slabs uncovered due to glacial retreat.

The guidebook is available through the accident prevention association, La Chamoniarde. The total budget for the operation, €16,000, was raised with the help of many donors, including the Petzl Foundation.

This ambitious project follows the reconstruction of the neighboring Périades bivouac, carried out in 2020. There are a number of these small bivouacs on the Italian side of the Mont Blanc massif, but they're more rare on the French side. Strategically placed in isolated spots along challenging routes, they offer small islands of refuge, much appreciated by the alpinists that use them. They also offer passionate alpinists the autonomous ascents they crave, totally immersed in the wild and natural landscapes that surround them.

Plans have been made to rebuild the Craveri bivouac on the Peuterey Intégrale, the Canzio bivouac on the Grandes Jorasses traverse, and the Charpoua bivouac.

Coll. Jean-Sébastien Knoertzer.
